Twilio  
Hiring Manager

## **Application for Principal, Full Stack Software Engineer**

Dear Hiring Manager,

With over 20+ years of experience architecting and delivering high-impact software solutions, I am eager to apply for the Principal, Full Stack Software Engineer position at Twilio. My track record of driving significant improvements in operational efficiency directly aligns with your team's mission to reinvent operations through AI and software automations. For instance, I successfully instituted Agile methodologies across development teams, enhancing overall efficiency by an impressive 35%.

My expertise encompasses leading the design and development of full-stack applications and distributed systems, leveraging technologies such as Node.js, Express.js, Java, and various database management systems including MongoDB, MySQL, PostgreSQL, and Oracle. I bring a strong engineering product mindset, evidenced by projects like engineering an advanced AR application and developing a custom Video Editor utilizing modern web technologies, both surpassing initial business requirements. Furthermore, my experience spearheading the implementation and maintenance of CI/CD pipelines across multiple project teams directly supports your focus on scalable and efficient software solutions, demonstrating my capacity to deliver robust architectural and technical blueprints.

As a technical leader, I am adept at mentoring engineers and fostering a culture of technical excellence and collaboration. My approach to problem-solving involves translating complex business requirements into tangible, scalable solutions, ensuring data quality and security throughout the development lifecycle. I am confident my background in cloud architecture, coupled with strong engineering fundamentals, will significantly contribute to Twilio's strategic goals for operational efficiency and customer success.

I am enthusiastic about the opportunity to contribute my skills and leadership to Twilio's innovative environment, particularly as you continue to push the envelope with AI/ML and software engineering platforms. I look forward to discussing how my experience can support your upcoming initiatives in driving global efficiency and delivering exceptional product experiences.

Sincerely,  
Adrian Nadeau
