Trolley
Hiring Manager

Application for Senior Software Developer

Dear Hiring Manager,

My 12 years of experience developing robust, scalable applications, including engineering a custom AR app and a video editor that surpassed business requirements, aligns perfectly with Trolley's focus on enhancing its flagship product and evolving its technical foundation. I am eager to apply my proficiency in Node.js, TypeScript, JavaScript, and PostgreSQL, along with extensive experience in architecting and deploying large-scale solutions, to contribute to your mission of building a truly global payouts ecosystem.

At CGS, I collaborated on full-stack development, integrating various databases including PostgreSQL and Oracle, and gained solid experience with AWS services. My background includes spearheading the development, implementation, and maintenance of CI/CD pipelines and upgrading the backends of over 20 projects, successfully transitioning builds from Ant to Maven. This involved extensive work with REST APIs and ensuring robust software development lifecycle practices, demonstrating my ability to manage complex, integrated systems with external dependencies.

I have a proven track record of enhancing development efficiency, notably by instituting Agile methodologies such as Sprints, SCRUM calls, and Kanban processes, which improved project delivery by 70% at JD Irving. My commitment extends to technical mentorship, where I've guided junior developers to significantly improve coding practices, and a strong analytical approach to assessing alternatives and risks. I also possess a keen ability to prototype quickly and iterate based on feedback, always maintaining high quality solutions.

I am confident that my blend of technical expertise, leadership in agile environments, and dedication to high-quality software development makes me an ideal candidate for this Senior Software Developer role. I am particularly enthusiastic about the opportunity to contribute to the strategic evolution of Trolley's platform as you continue to scale and introduce new features.

Sincerely,
Adrian Nadeau
